Secureworks

Secureworks Taegis IDR

Uncover identity risks in under 90 seconds[1] and benchmark the reduction of your identity attack surface over time.

Secureworks detects and responds to identity threats that bypass traditional identity security controls, protecting against 100% of MITRE ATT&CK Credential Access techniques[2]. Taegis™ IDR, an add-on designed to improve your security posture, continuously monitors your environment for identity misconfigurations and risks, while also providing dark web intelligence on compromised credentials. Uncover identity risks in under 90 seconds[1] compared to days with legacy solutions and benchmark the reduction of your attack surface over time.

Reduce Your Identity Attack Surface

95% of Microsoft Entra ID environments are misconfigured[3]. Taegis IDR continuously scans these environments to rapidly identify and prioritize misconfigurations and identity-based security gaps. Unless addressed, cybercriminals can use these exposures to escalate privileges and carry out identity-based attacks. Leveraging the Identity Posture Dashboard, teams can quickly address risks including gaps in Conditional Access policies, orphan accounts, over-privileged accounts, and risky applications.

Reduce Risk of Leaked or Stolen Credentials

Secureworks has observed a 688% increase in stolen credentials available for sale on a single dark web marketplace over the last three years[4]. Taegis IDR monitors and alerts on exposed credentials, enabling teams to significantly reduce the risk of those credentials being used to successfully execute an attack. Taegis IDR identifies risky user behaviors, monitoring for when stolen or compromised credentials are used to access a system, and identifies unusual login patterns, such as logins from unexpected locations.

CUSTOMER BENEFITS

Uncovers identity exposures in Microsoft Entra ID in under 90 seconds[1] to reduce your identity attack surface

Scans the dark web for leaked credentials and alerts you when login credentials have been exposed in data breaches

Identifies risky user behaviors and abnormal activity associated with stolen credentials

Provides rapid and comprehensive visibility into identities across systems to allow teams to work effectively to address exposures

Detects 100% of MITRE ATT&CK Credential Access techniques[2] and accelerates threat response with automated playbooks

Gain Full Visibility into Identities

Get rapid and comprehensive visibility into identities across systems for straightforward identity management. See an overview of users, groups, devices, and apps and monitor for changes in identity posture. View your entire identity catalog and work effectively to remediate exposures before they can be exploited and feel confident that you have addressed the most pressing risks. Taegis IDR is managed centrally in the Taegis XDR platform for comprehensive protection across identity, endpoints, network, cloud, email, and other business systems.

Protect Against Identity Threats

90% of organizations experienced an identity breach last year[5]. Taegis automatically detects, prioritizes, and responds to identity-based threats before they can impact your business. Secureworks enables organizations to proactively identify sophisticated threats, such as kerberoasting, password spraying, and brute force attacks, early in the attack chain and automatically respond with speed and precision. Teams can work more efficiently with automated, out-of-the-box playbooks to take immediate response actions on a compromised identity, including disabling a user, forcing a password reset, locking an account, and revoking a session.

"

I am thoroughly impressed with Taegis IDR and how it has improved visibility into our identity risks. Having the information available within XDR is huge.

Richard Hay,
Senior Information Security Officer,
First Community Bank

"

Taegis IDR is uncovering risks in areas that I used to worry about within Azure and the Microsoft ecosystem, like conditional access policy gaps and insecure or over-privileged applications.

Senior Information Security Officer

Secureworks®

Secureworks (NASDAQ: SCWX) is a global cybersecurity leader that secures human progress with Secureworks® Taegis™, a SaaS-based, open XDR platform built on 20+ years of real-world detection data, security operations expertise, and threat intelligence and research. Taegis is embedded in the security operations of thousands of organizations around the world who use its advanced, AI-driven capabilities to detect advanced threats, streamline and collaborate on investigations, and automate the right actions.
