Secureworks®

Secureworks is pleased to announce the general availability of a new log management solution, LogVault 2.x effective 01/31/2013. With the availability of LogVault 2.x - LogVault X & LogVault L product lines will follow an end of sale and end of support path as outlined below.

LogVault X, LogVault L EOL/EOS Dates

End of Sale for existing LogVault X, LogVault L devices	01/31/2013
End of Support for LogVault X, LogVault L	01/31/2016

An environment that is a hybrid of both LogVault X/L and LogVault 2.x, will not allow for search of logs stored across LogVault X/L and LogVault 2.x devices. In those cases, you will have to go to two different portals for log data search. Please reach out to sales team to procure additional LogVault X/L devices before the end of sale date if this is not a desired scenario.

Secureworks does not plan to release additional functionality for the LogVault L and X system after the 01/31/2013 End of Sale Date. Bug fixes and security patches will be provided to customer based on its criticality determined by Secureworks until 01/31/2016.

LogVault 2.x is powered by underlying LogLogic technology and offers centralized log data collection and retention solution. Designed specifically for small to mid-size deployments, LogVault 2.x provides the disk space and processing power required for most non-enterprise environments. LogVault 2.x features support the need to harness the power of log data for a safer, more reliable network, while reducing corporate IT costs and providing rapid return on investment.

LogVault 2.x Benefits

- Log data aggregation from centralized and remote log data sources
- Real-Time display of log messages, Ad-hoc queries and fast drill downs to speed up identification, isolation and repair of security and network incidents
- Long-term retention of unaltered, complete, raw log messages at a secure, central location to make archives unimpeachable
- Distributed architecture of remote collection and central storage make log data collection and retention scalable

LogVault 2.x Features

- 3.8TB in raw storage
- Sources data from up to 500 log sources
- Index Search
- Regular Expression Search
- Real Time Viewer
- Custom Data Retention policies
- NFS/SCP backup methods
- Real time display of message rate/CPU usage
- Scheduled searches
- Save and export search results
- Up to 12:1 data compression
- Ability to run compliance reports (as an add-on)
